

thesthack

The **Next** Generation Cyber Security Training Platform

1

Designed for multiple organizations to respond to the new emerging threats

thesthack is the perfect keys in hand solution for Security Operation Centers, Incident Response Teams, HR and more generally Cyber Security Departments to improve and check the skills within the organization.

2

Secure VPN Connection to access thesthack cloud

The access to thesthack cloud is secured by industry-standard VPN connection to safeguard the privacy and customer specific contents.

2 Factors Authenticated VPN Access

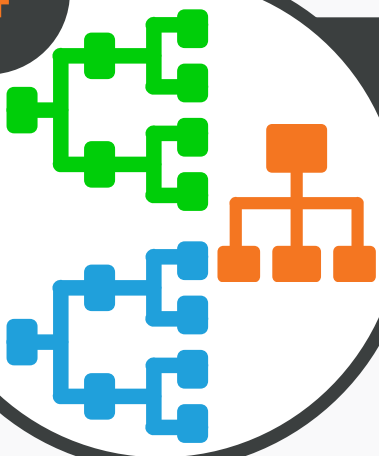

3

Configure, manage and deploy virtual labs, access training materials and security news

Every time you launch a new lab environment, networks and systems are deployed and ready for testing. Depending on the lab you choose to play with, you can access all of the related training materials to learn how to hack or fix the vulnerabilities in place. Security news feeds are also available to keep yourself updated with the latests disclosed vulnerabilities.

4

Different real-life attacking scenarios including infrastructures and applications

From thesthack platform web interface you can run different real-life scenarios, including complex network infrastructures containing different types of operating systems, CPU architectures, firewalls, network devices and custom applications (web and/or standalone binary applications).

5

Self assessment questionnaires and quizzes to check your progress

While you are training on your labs or after you complete your training session, self assessment questionnaires and quizzes are available so you can quickly evaluate your own progress and those of your team. A statistic dashboard will show your score and how you rank among others.
